

Activity Sheet
Chapter 4, Lesson 1
Protons, Neutrons, and Electrons

Name _____

Date _____

INTRODUCTION

If you look closely at the tip of a sharpened pencil, you will see that it is made of graphite. Going deeper, graphite is made of carbon atoms. Deeper still, each carbon atom is made of protons, neutrons, and electrons. In this lesson, you will explore these subatomic particles and their charges.

1. Label the nucleus (protons, neutrons) and electrons in the drawing of a carbon atom above.
2. Draw a line between the subatomic particle and its charge.

proton	no charge
electron	positive charge
neutron	negative charge

3. Would the following subatomic particles attract each other or repel one another?

Two protons _____

Two electrons _____

A proton and an electron _____

ACTIVITY

Question to investigate

What makes objects attract or repel each other?

Materials for each group

- Plastic grocery bag
- Scissors

Procedure, part 1

Charged plastic and charged skin

1. Cut 2 strips from a plastic grocery bag so that each is about 2–4 cm wide and about 20 cm long.
2. Hold the plastic strip firmly at one end. Then grasp the plastic strip between the thumb and fingers of your other hand as shown.
3. Quickly pull your top hand up so that the plastic strip runs through your fingers. Do this three or four times.
4. Allow the strip to hang down. Then bring your other hand near it.
5. Write “attract” or “repel” in the chart on page 226 to describe what happened.

Protons and electrons
before rubbing

Protons and electrons
after rubbing

Opposites attract

Procedure, part 2

Charged plastic and neutral desk

1. Charge one strip of plastic the same way you did previously.
2. This time, bring the plastic strip toward your desk or chair.
3. Write “attract” or “repel” in the chart on the next page.

Protons and electrons
before rubbing

Plastic

Protons and electrons after
rubbing

Neutral
(more positive
near plastic)

Opposites attract

Neutral
(more positive
near plastic)

Procedure, part 3

2 pieces of charged plastic

1. Charge two strips of plastic
2. Slowly bring the two strips of plastic near each other.
3. Write “attract” or “repel” in the chart on the next page.

Two neutral plastic strips

Plastic

Two charged plastic strips

EXPLAIN IT WITH ATOMS & MOLECULES

What happened when you brought the following materials near each other?		
Materials	Attract or Repel	Use what you know about electrons, protons, and charges to explain your observations
charged plastic + charged skin		
charged plastic + neutral desk		
charged plastic + charged plastic		

TAKE IT FURTHER

Materials for each group

- Inflated balloon
- Small pieces of paper, confetti-size

Procedure

- Rub a balloon on your hair or clothes.
- Bring the balloon slowly toward small pieces of paper.

4. Write captions beneath each picture explaining what happened between the balloon and your hair and the balloon and the paper in the activity.
